

# Attention!!!

## AutoSock

### Tips for Effectiveness

- **Use the proper AutoSock size for your tires for best performance. Always test fit before using.**
- **Avoid excessive speed as it increases wear. Cars to not exceed 30mph and commercial vehicles not to exceed 20mph**
- **Don't spin the tires, use a "light foot" on the accelerator.**
- **AutoSock is designed to increase traction on snow and ice. Driving on dry or damp roads significantly increases wear. Unlike chains, AutoSock is quiet so don't forget that they are on!**
- **Do not leave AutoSock on the tires while parked overnight or parked for long periods when it will freeze.**
- **After removal, store wet AutoSocks inside where they will not freeze.**
- **Slow down in deeper snow**
