• Remove your existing hold down bracket.
• Measure and see if any minor adjustments need to be made.
  o Examples:
    ▪ Drilling holes for new anchor bolts
    ▪ Cutting length of anchor bolts to fit - avg. length 9 ¼”

• Install bottom of locking bar with existing or modified hardware.
  ❖ In some instances, the direction of the batteries leaves the front anchor bolt exposed.
    We recommend using a ½” pipe to sleeve around the anchor bolt. This will prevent a bolt cutter access to bite.

• Using the key, lock the top locking bar over the bottom to secure your battery’s hardware.
